RYAN OSKUIE

San Jose, CA • (408) 768-2798 • ryanoskuie@gmail.com • LinkedIn • GitHub • Portfolio

Recent Computer Science graduate with production software engineering experience in C# and Python. Combines hands-on development with a background in testing and validating hardware to build and debug reliable software.

PROFESSIONAL EXPERIENCE

Onto Innovation — **Dec 2024 – Present**
Software Engineering Contractor — *Hybrid / Milpitas, CA*

- Developed and maintained advanced GUI tools in C# and WinForms for semiconductor image analysis, following Model-View-Controller (MVC) architecture.
- Built and optimized a defect classification algorithm in C#, delivering a solution 10x faster than the existing approach and accelerating the team's inspection workflow.
- Implemented new product features including subimage extraction and refined UI event handling, then validated each change through targeted debugging.
- Test and debug individually assigned features — including writing test cases and investigating reported issues — while collaborating with senior engineers on more complex fixes.

Lumina Instruments — **Jun 2024 – Aug 2024**
Engineering Intern — *Sunnyvale, CA*

- Tested electronic circuit boards and power supply modules using multimeters, oscilloscopes, and function generators to validate hardware behavior against spec.
- Revised and updated internal test procedures to reflect current hardware revisions, improving accuracy and reducing repeat work for the engineering team.
- Configured production computer systems end-to-end, installing hardware components and software applications to support ongoing test operations.

Cepheid — **Jun 2022 – Sep 2022**
Manufacturing Software Engineering Intern — *Sunnyvale, CA*

- Partnered with the firmware verification team to perform functional, optical, and thermal calibration tests on a flagship diagnostic product.
- Validated the manufacturing software against the test protocol, identifying and closing gaps to ensure full coverage between hardware tests and software checks.
- Contributed to a C# project designed to surface module failures earlier in the production line, helping reduce downstream rework.

EDUCATION

California State University, Fullerton — May 2026
B.S. in Computer Science — *Fullerton, CA*

De Anza Community College
A.S. in Computer Science — *Cupertino, CA*

SKILLS

Languages: C#, C++, Python, SQL, HTML, CSS

Frameworks & Tools: WinForms, MVC, Git, GitHub, MySQL, Visual Studio

Hardware & Lab: PCB testing, Power supply testing, Multimeters, Oscilloscopes, Function generators, PC build & configuration

Coursework: Data Structures & Algorithms, Network Security, Applied AI, Discrete Mathematics, Algorithm Engineering, Databases
